SUMMARY OF SEPTEMBER WATER QUALITY SAMPLING

Sampling for September 2018 occurred on the fourth and was considered a high flow collection. Water samples were collected at ten locations, including two stormwater outfalls, and discharge measurements were collected at two locations. Mesonet data shows 2.13 inches of precipitation occurring on the fourth, 0.09 inches of precipitation in the 72 hours prior to sampling, and 1.49 inches of precipitation in the 72 hours after the sampling event. The total rainfall amount in Norman for the month of September was 7.73 inches. All water level gauges were operational for the month, with the exception of CC-1 as a result of road construction activity, and LT-1 due to equipment malfunction.

Table 3 QA/QC Data

Quality assurance/quality control (QA/QC) of the data includes a field blank and duplicate sample from each collection event, and is qualified by the OWRB. Relative Percent Difference (RPD) of the duplicate sample can be categorized into four levels, where Level 1 likely has no QA issues and Level 4 has major QA issues, and should be used with caution.
